Hi Jacob,

I started reviewing the memo and I have some questions about the assumptions/calculations regarding the daily contribution to the sewer system from the homes. Since this issue is an important component of re-introduction of the landfill leachate, I would like some information before continuing my review.

Wondering if there is actual data available regarding the contribution to the sewer system from the homes vs. assumptions? Copying Joe Stroin to see if he can provide insight on this.

Thanks,

Gwen

Subject: [EXTERNAL] Monroe Township Landfill - Leachate Memo

Good evening,

Please find attached a revised memorandum discussing the plan for reintroduction of leachate into the sanitary sewer. Please review and return any questions or commentary at your earliest convenience. We were uncertain of distribution for the team with Jacobs Engineering so they have not been included in this distribution, please share with any members of Jacobs, NJDEP, EPA, or MTUD who were omitted.

Attachment B includes information regarding equipment, installation, and intended use of monitoring devices to be utilized for observation, analysis, and implementation with the sewer reintroduction. As was discussed in our previous meetings, we would like to request this email serve as a 48-hour request and we would like to coordinate installation of monitoring equipment to occur next week, or as soon as is permissible.

Thank you again for your cooperation and efforts,

Jacob Schmidt
